Summary

Passionate AI/ML/Data Engineer skilled in building practical machine learning models, extracting insights from complex datasets, and developing intelligent AI-driven solutions. Strong foundation in EDA, data preprocessing, machine learning, NLP, and deep learning with hands-on experience in real-time data preparation, data analytics.

Education

Sri Venkateshwara College of Engineering, Bengaluru

July 2025

B.E. in Computer Science and Engineering (CSE)

- CGPA: 7.55/10 (VTU)

Projects

Breast Cancer Detection using Machine Learning and CNN

- Conducted comparative analysis of breast cancer classification using Random Forest, CNNs, and InceptionV3 on labeled medical imaging datasets.
- Achieved improved classification accuracy through data augmentation with comprehensive evaluation using precision, recall, and F1-score metrics.
- Demonstrated Random Forest efficiency on structured data while CNN and InceptionV3 provided superior results for complex image classification.

End-to-End Book Recommendation System

- Developed an end-to-end Book Recommendation System using Python, Scikit-learn, and Streamlit to deliver personalized book suggestions through an interactive web application.
- Built and automated a complete machine learning pipeline including data ingestion, validation, transformation, feature engineering, and model training using K-Nearest Neighbors (KNN).
- Implemented recommendation logic using sparse matrix transformation and collaborative filtering techniques to improve recommendation accuracy and user experience.

Custom Transformer-based Large Language Model (LLM)

- Built a Transformer-based Large Language Model with control over training and inference workflows.
- Implemented token embeddings, positional encoding, multi-head self-attention, feedforward layers, and layer normalization.
- Developed tokenization and preprocessing pipelines and fine-tuned the model on e-book datasets.

Skills

- | | |
|----------------|-----------------------|
| ◦ Python | ◦ Machine Learning |
| ◦ MySQL | ◦ Feature Engineering |
| ◦ NumPy | ◦ EDA |
| ◦ Pandas | ◦ Prompt Engineering |
| ◦ Scikit-learn | ◦ Statistics |

Internship

Data Science Intern — TechCiti Software Consulting Pvt. Ltd., Bengaluru

February 2025 – May 2025

- Developed a Wind Turbine Monitoring and Analytics pipeline using Python, Pandas, MySQL, and SQLAlchemy for real-time sensor data processing and analysis.
- Implemented data engineering workflows including data ingestion, database integration, preprocessing, feature extraction, and automated real-time data streaming.
- Performed Exploratory Data Analysis (EDA) and visualization using Matplotlib, Seaborn, Plotly, and Bokeh to identify operational patterns, turbine performance trends, and failure indicators.

Certifications

- Tata Group Data Analytics Virtual Internship — Forage (Aug 2025)
- Prompt Engineering & Programming with OpenAI — Columbia+ (Aug 2025)
